

Mr. Aleister Crowley is well-known all over the world for his writings; yet only a very few people know of what those writings consist.

This book is intended to give as full an idea as possible of his work published from 1897-1946. The poems have been chosen for their representative character their range and diversity, both in their subjects and in the remote places of their origin. There is in this book at least one treasure for everybody.

There has been no room to include any reference to Mr. Crowley's major work; his prose essays, short stories, novels and plays.

It is for its depth as well as its breadth that this volume will serve as an introduction to the study of its author: a characteristic view, though of one section only, the most important, of his vast output.
